Ratings on . . .

eBay®

MobiRate:

how mobiles collect & store ratings

Why ratings on mobiles?

Situation: People exchange
digital content

drowning user
(content overload)

help!

who will come to the rescue?

**Proposal: Accept content only
from reputable people**

how mobiles collect & store ratings

collect > store > use

collect >

store

> use

How to collect & store ratings?

1. Log (credentials)

2. Gossip (to check each credential)

1. Log
(credentials)

2. Gossip
(to check each credential)

☹️ → Impractical

Idea behind MobiRate

Let's make it practical...

1. Sealed Log (of credentials)

2. Gossip (to check seals only)

1. Sealed Log (of credentials)

2. Gossip (to check seals 😊 only)

😊 → Practical

Assumption

ID is a unique public key

Gossiping: To whom?

To witnesses

What witnesses do

Audit!

What witnesses do

Audit!

Why?

If one is ignorant If one is a forger

Who are my witnesses

Those who will share
content with me

Who are my witnesses

**Like-minded
familiar strangers**

1. Sealed Log (of credentials)

2. Gossip (to check seals 😊 only)

😊 → Practical

Does MobiRate work?

Mobility Traces AND Social Networks

Reality Mining

Does MobiRate work?

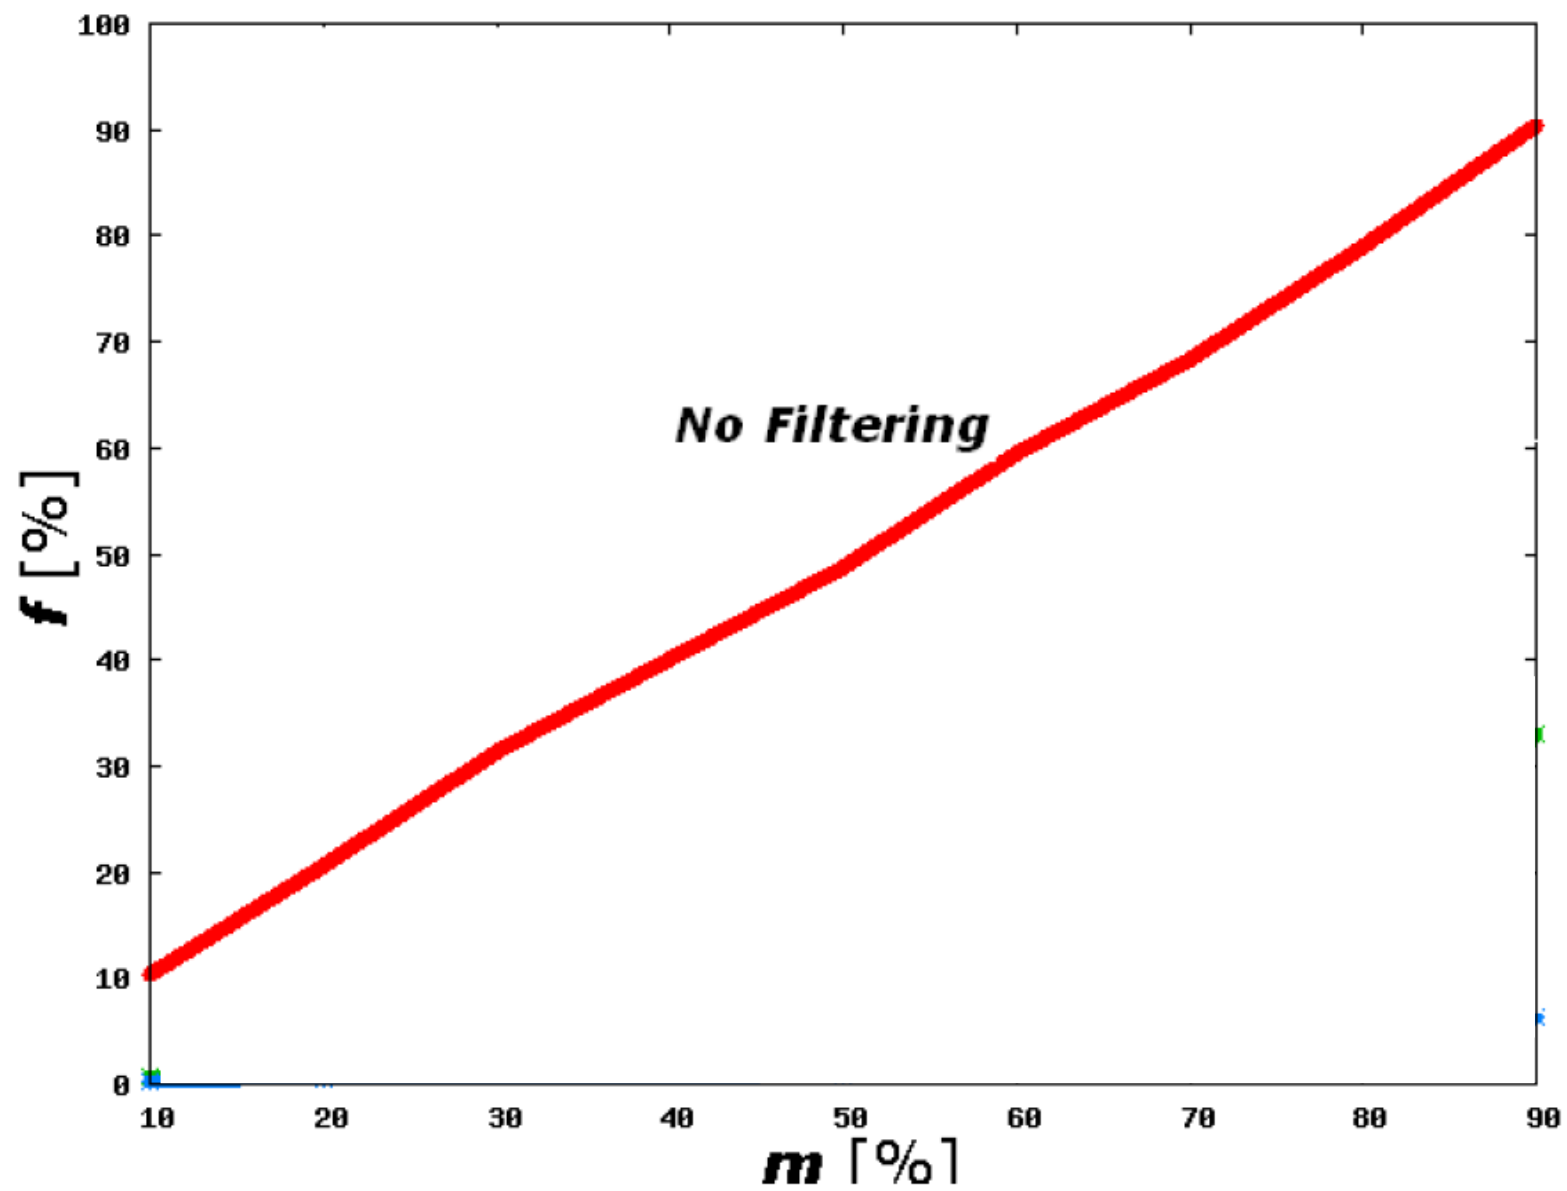

Does MobiRate work?

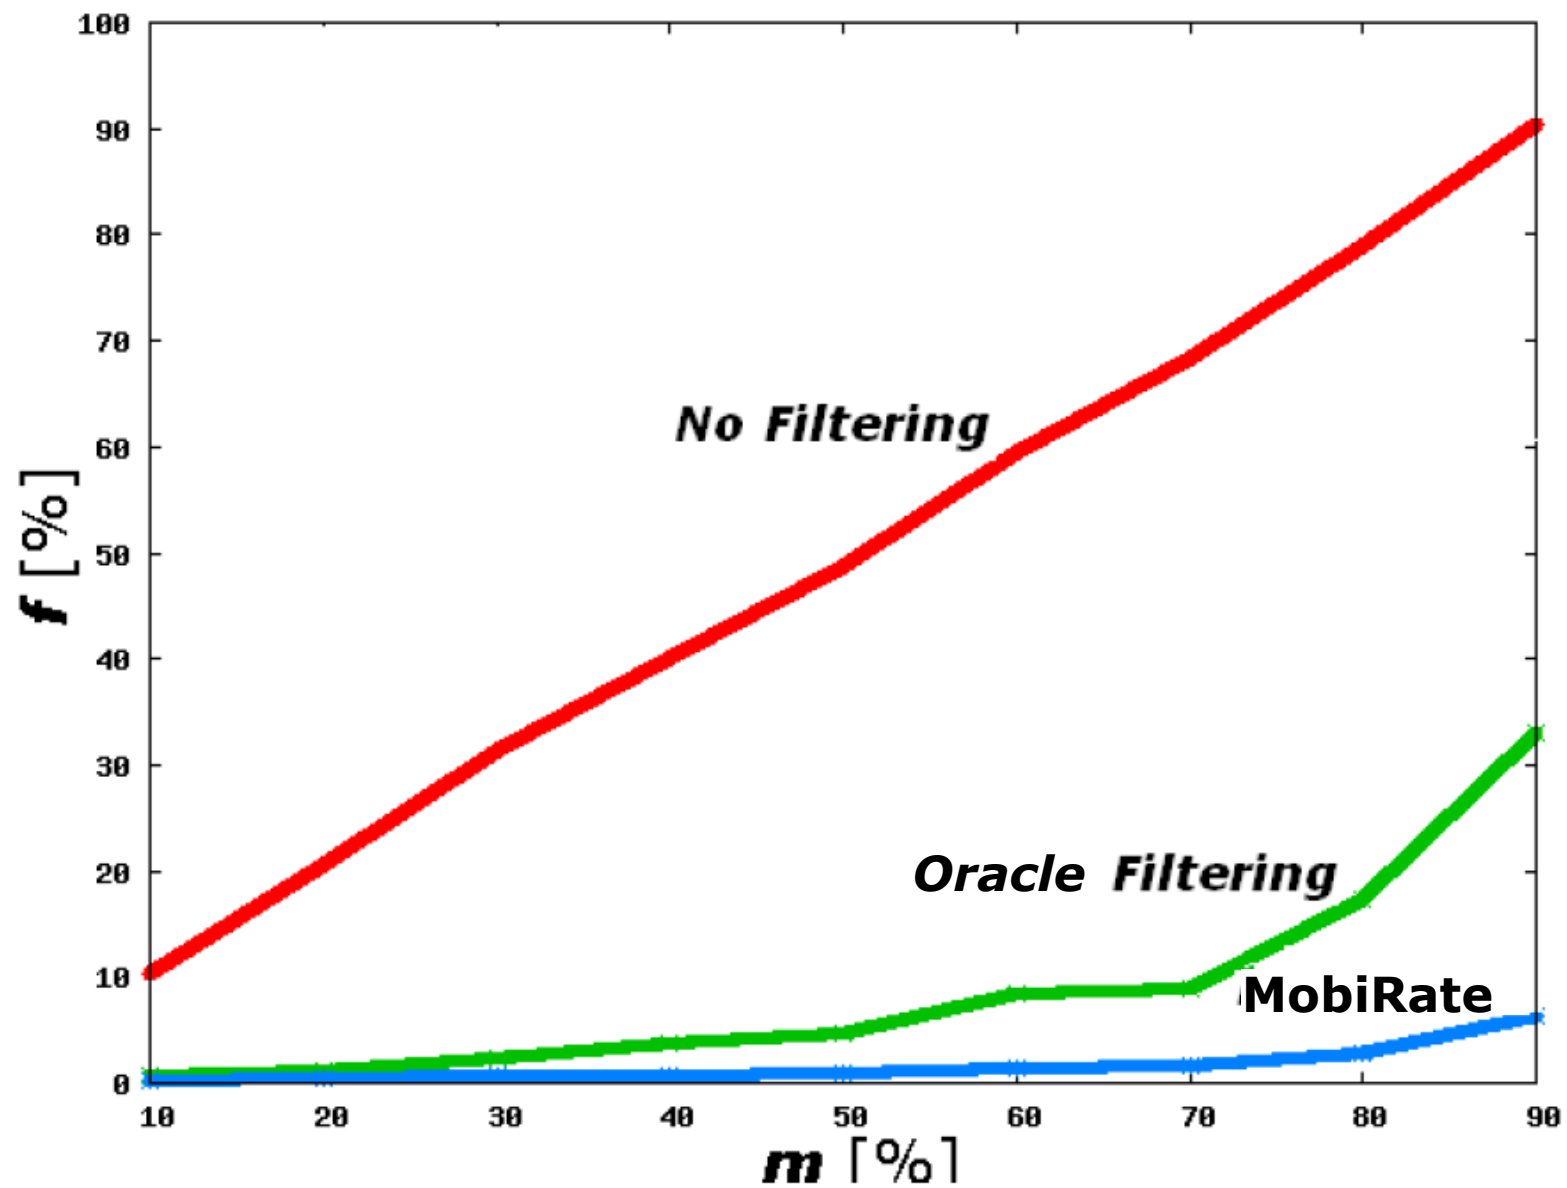

- <1> Is it **robust** to malicious individuals?
- <2> Does it **run** on phones?

<1> robust

The *f* factor

MobiRate reduces $f!!!$

<2>

run

“heaviest” protocol runs $< 2\text{sec}$

**“longest” protocol completed
in 2.5ms (if Bluetooth 100kb/s)**

MobiRate works

- ✓ robust
- ✓ runs on phones

Ignorant

Forgers

is a step towards...

... rescuing drowning user

[ICDM07] Lightweight Distributed Trust Propagation

1. Sealed Log (of credentials)

B's Rating Table

e_{k-1}	h_{k-1}	a_{k-1}^B	...
e_k	h_k	a_k^B	a_k^A
e_{k+1}	h_{k+1}	a_{k+1}^B	...

entry (rating)

"seal" (for the entry)

1. Sealed Log (of credentials)

[need to exch seals]

B's Rating Table

e_{k-1}	h_{k-1}	a_{k-1}^B	...
e_k	h_k	a_k^B	a_k^A
e_{k+1}	h_{k+1}	a_{k+1}^B	...

entry (rating)

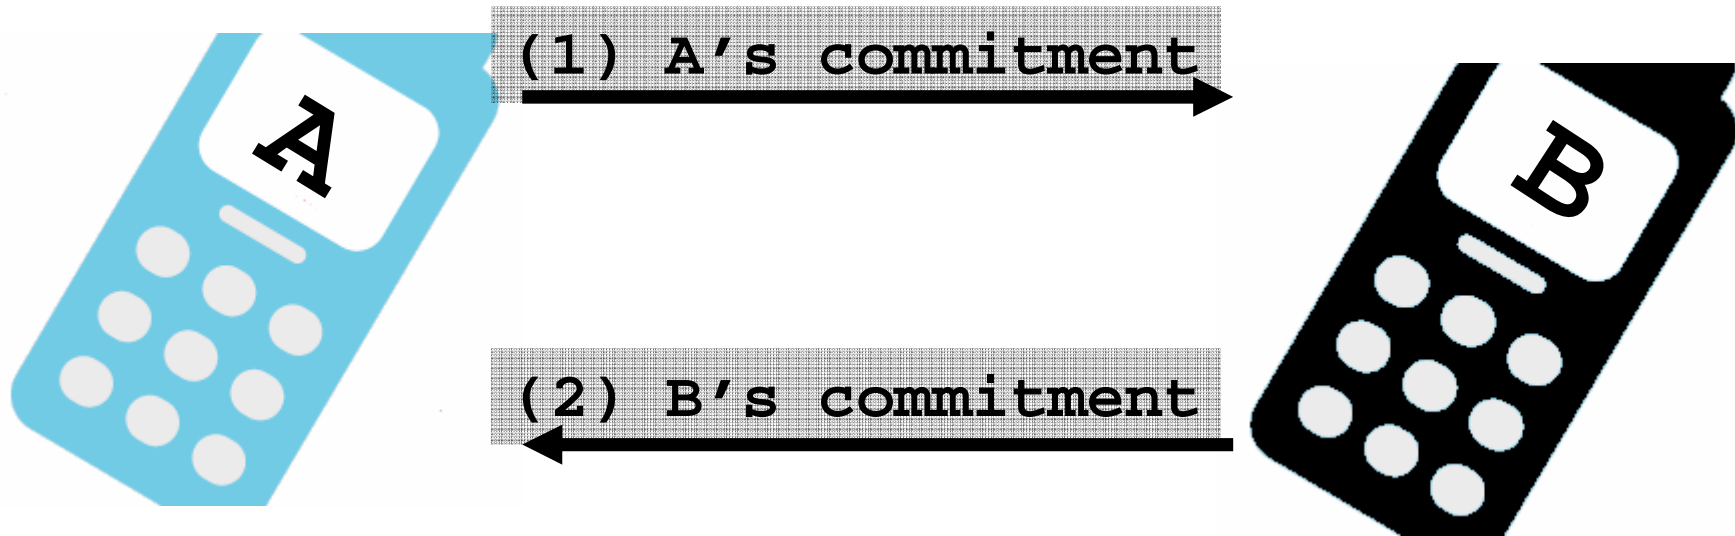

"seal" (for the entry)

"hash chain" binding whole table

Exchange of seals

[asymmetric interaction]

What can go wrong?

(that's where gossiping comes in)

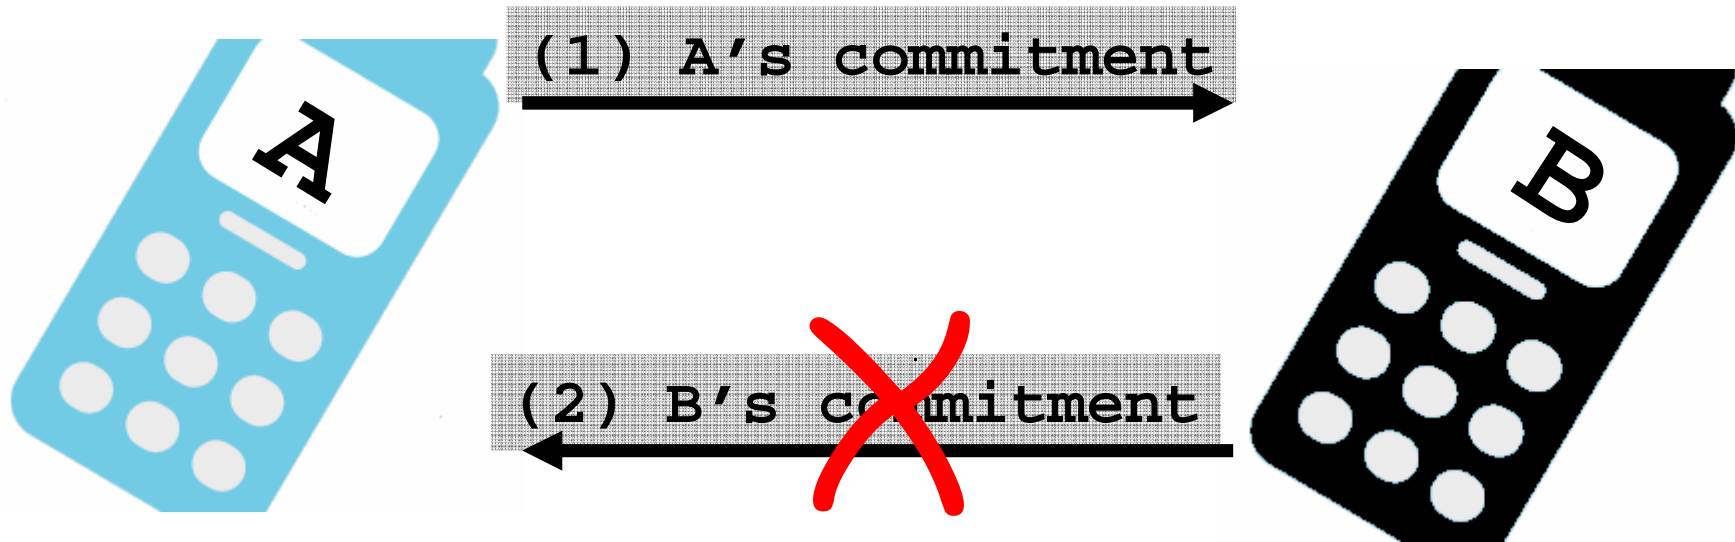

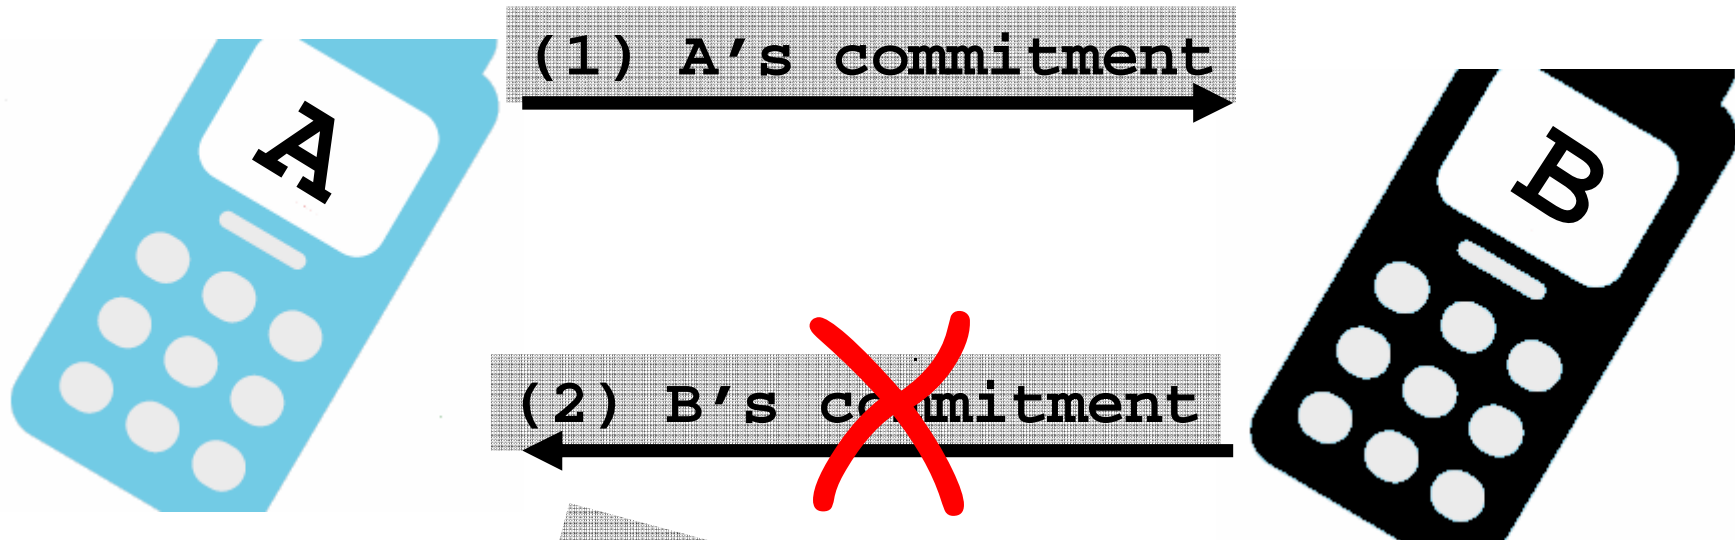

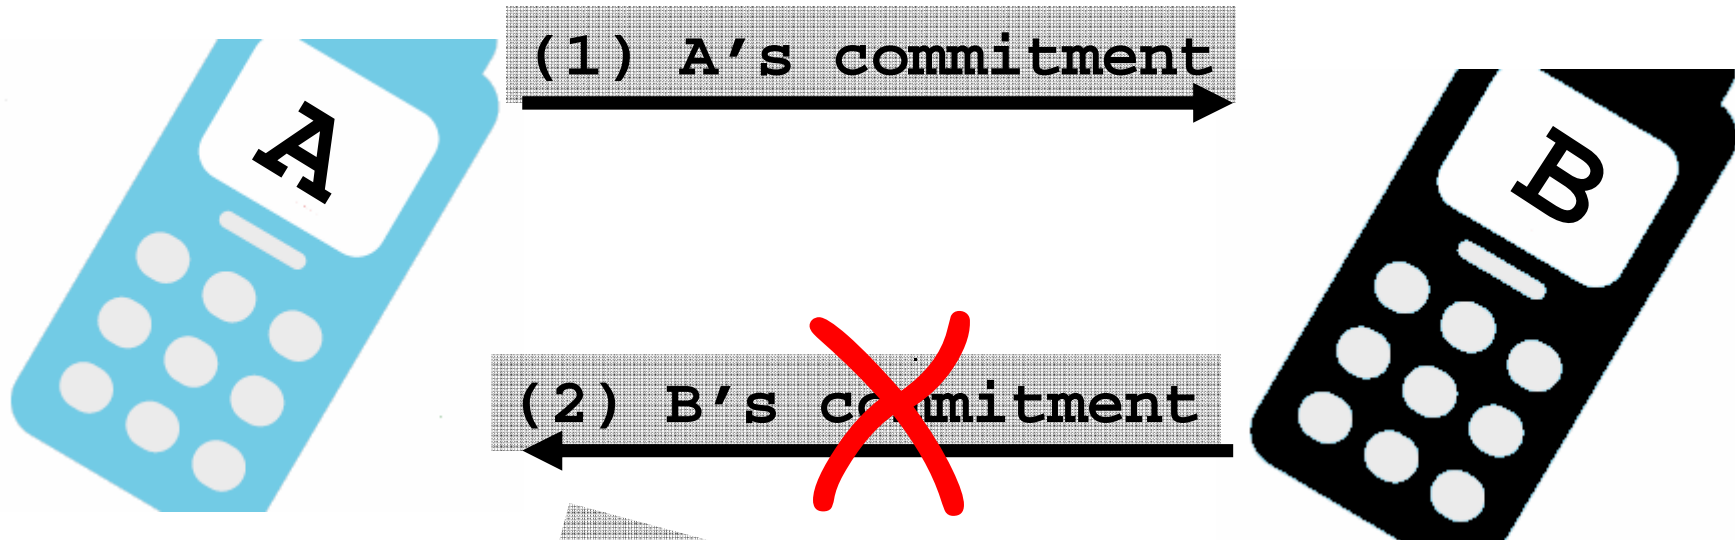

Fair enough!

A decides whether to rate B

[B is forced to store it. Otherwise its chain is broken]

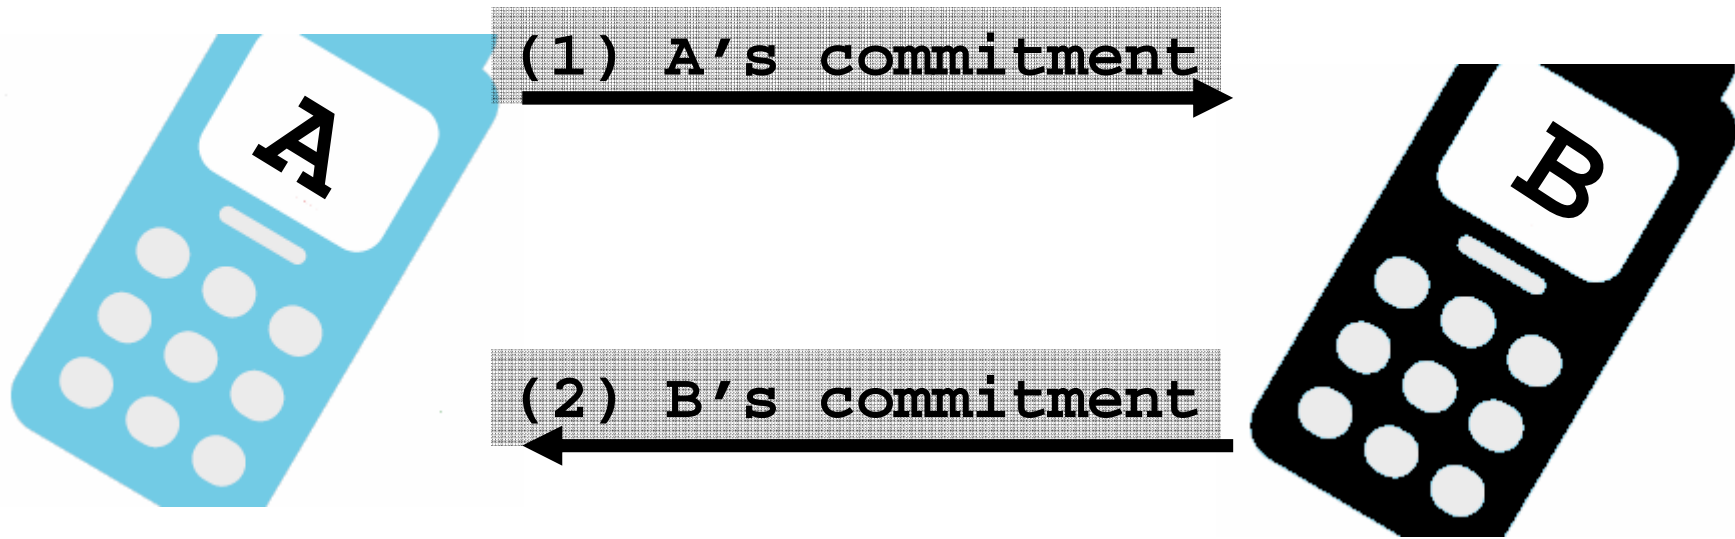

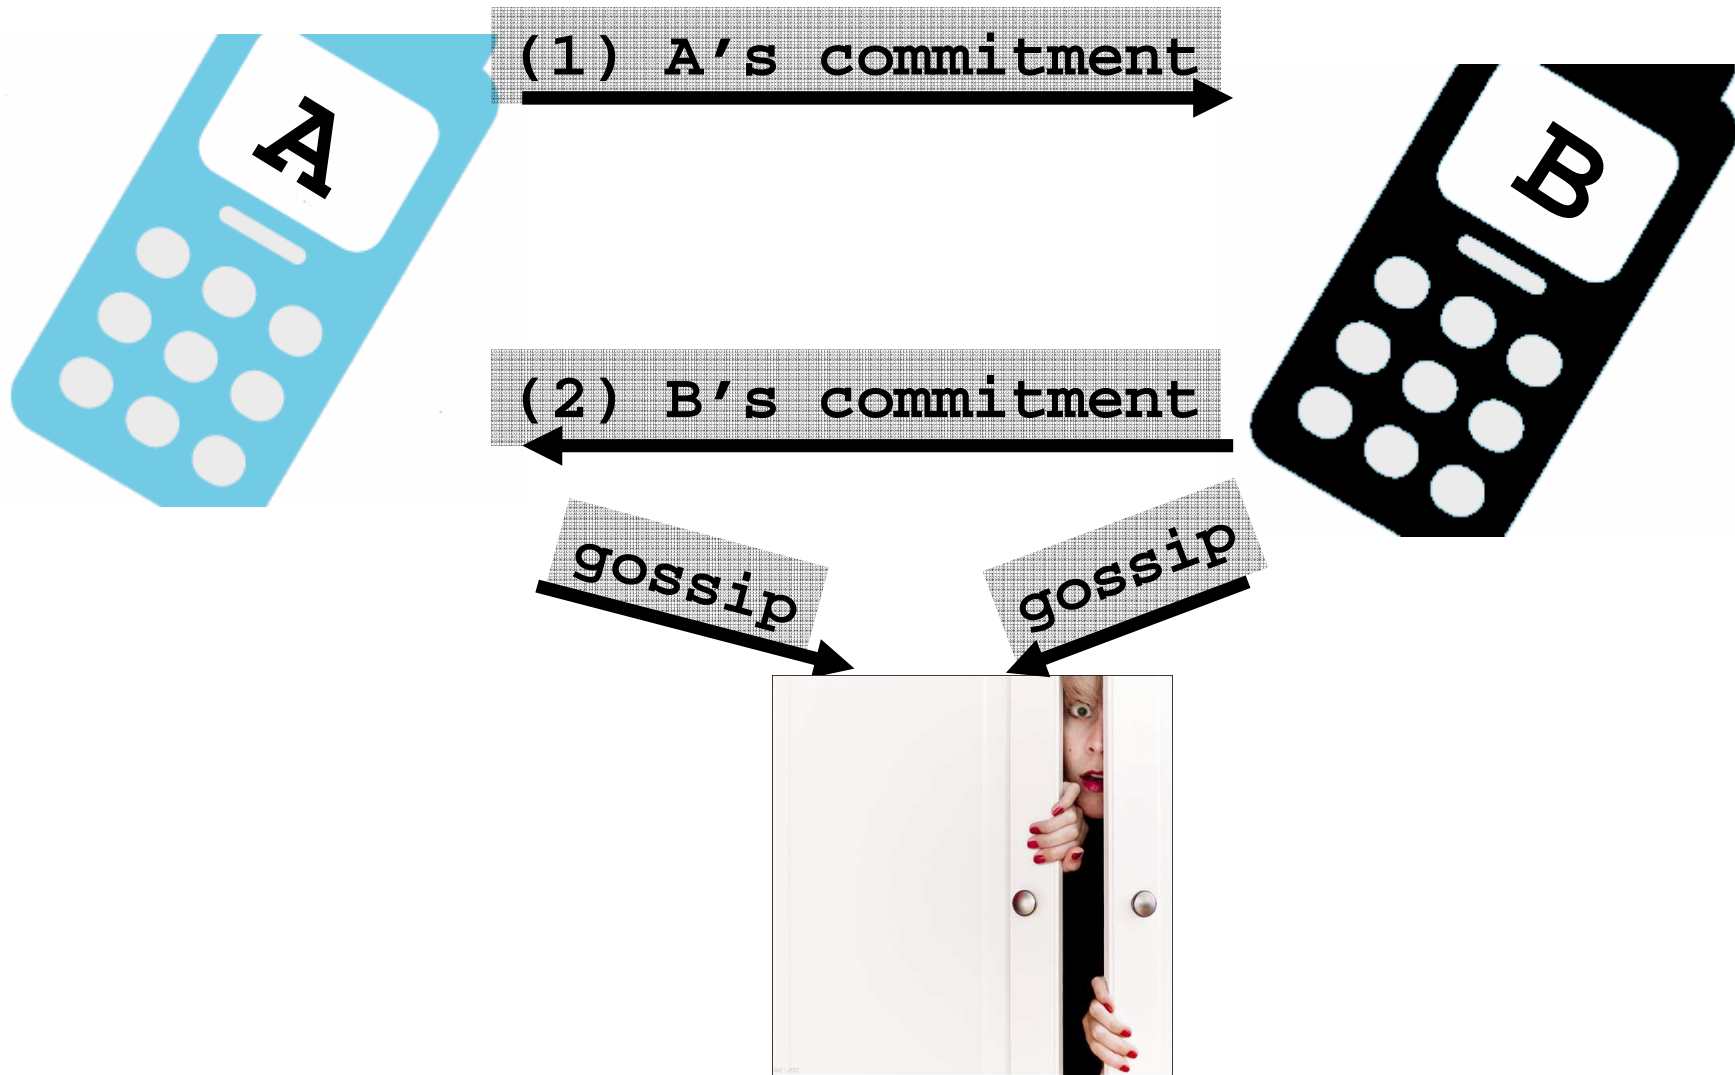

gossip

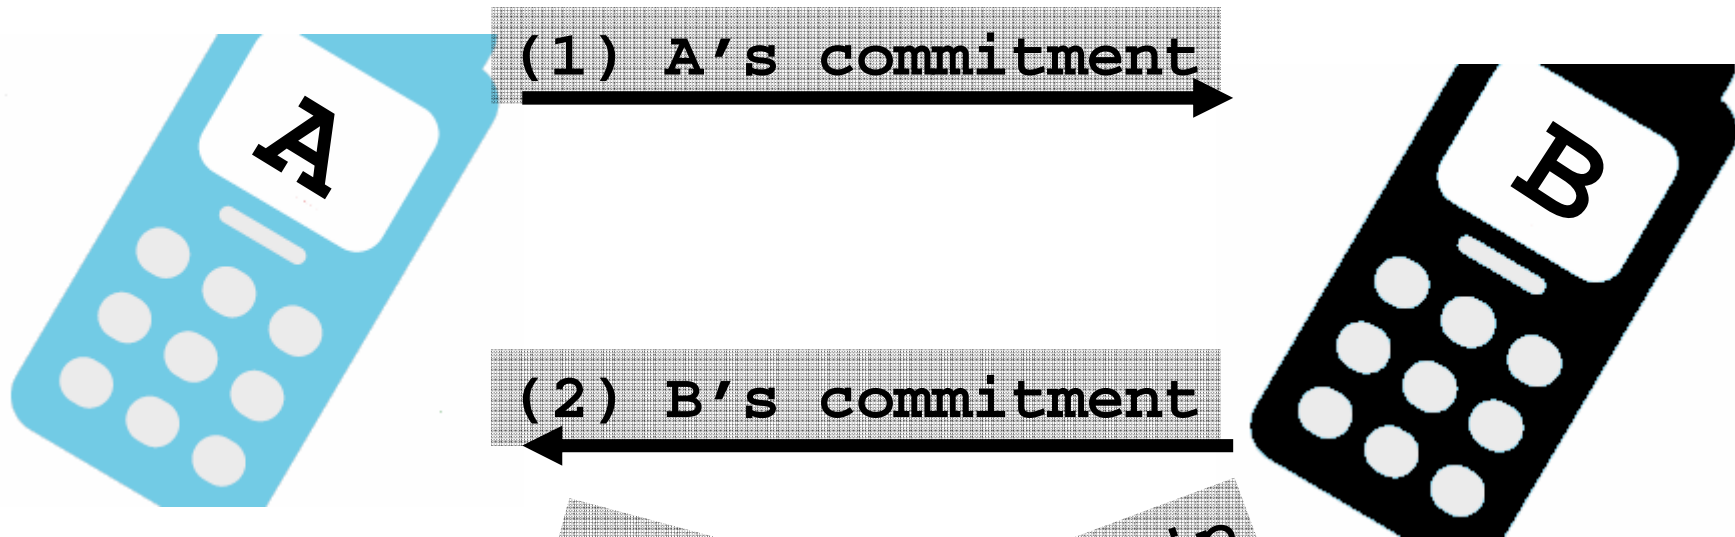

Hey B, I'll run commit with u later

Finally, ...

(1) A's commitment

(2) B's commitment

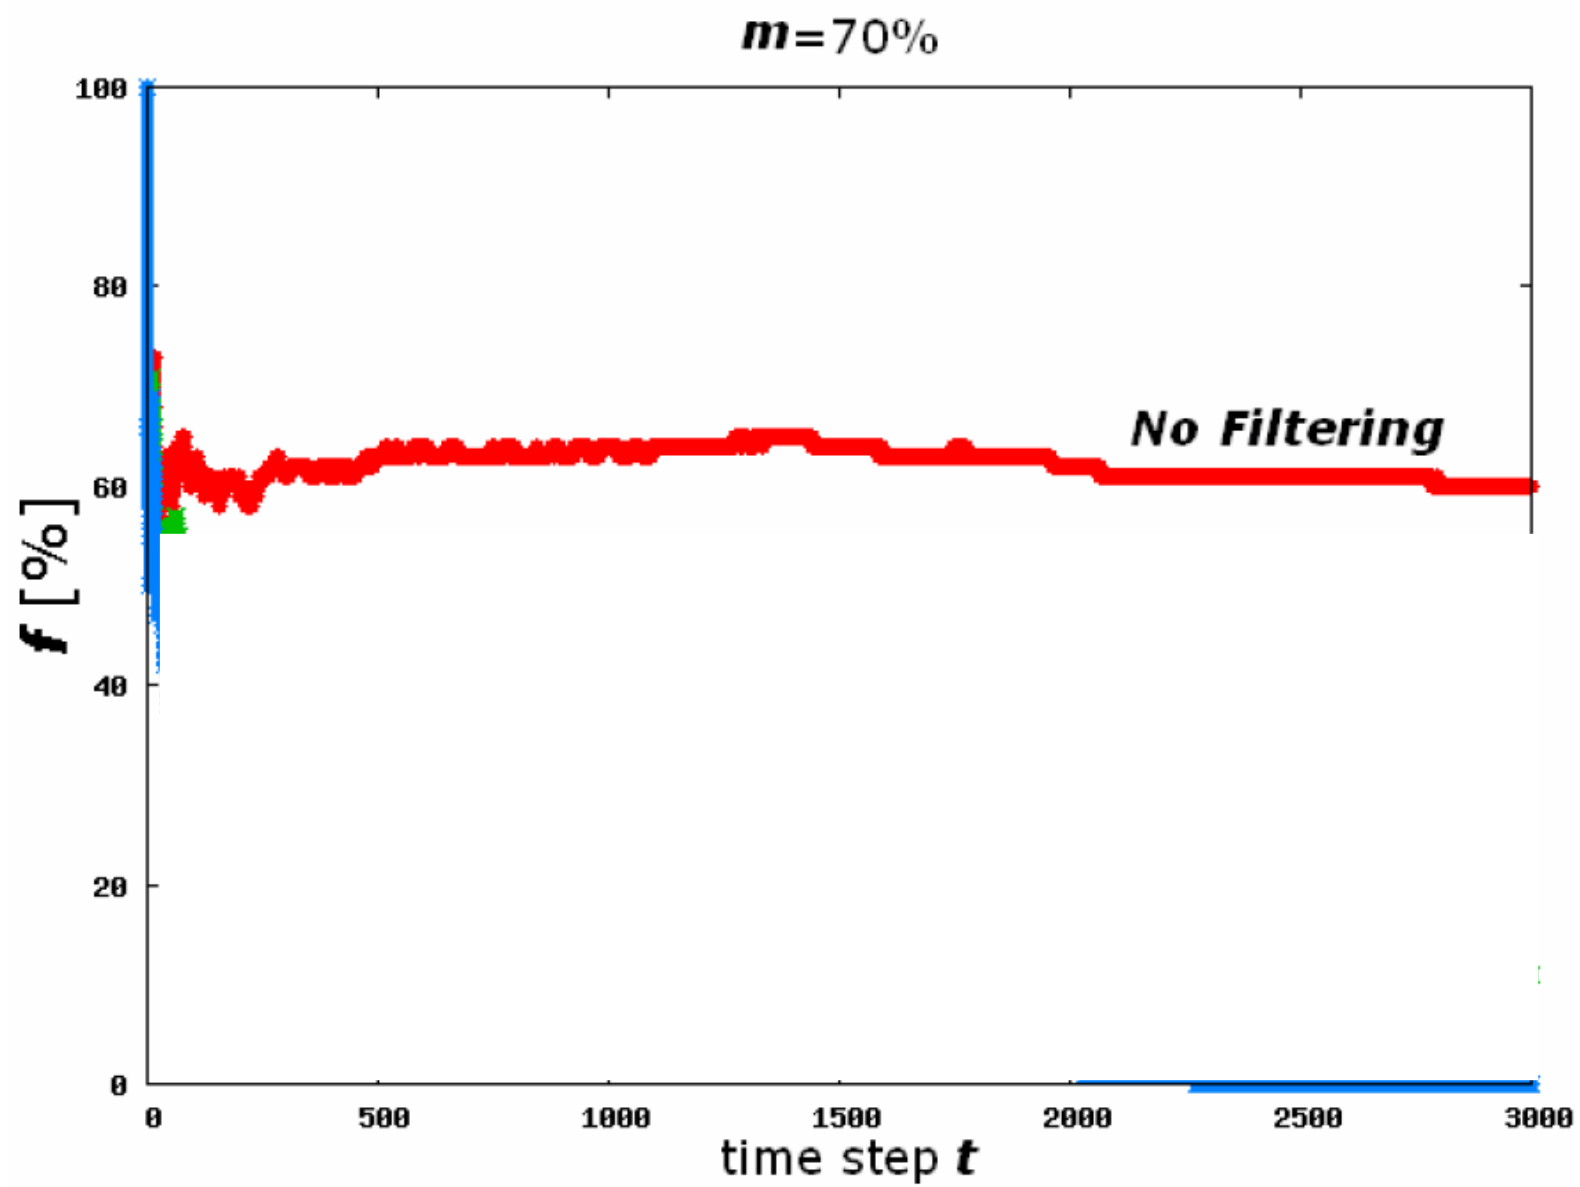

gossip

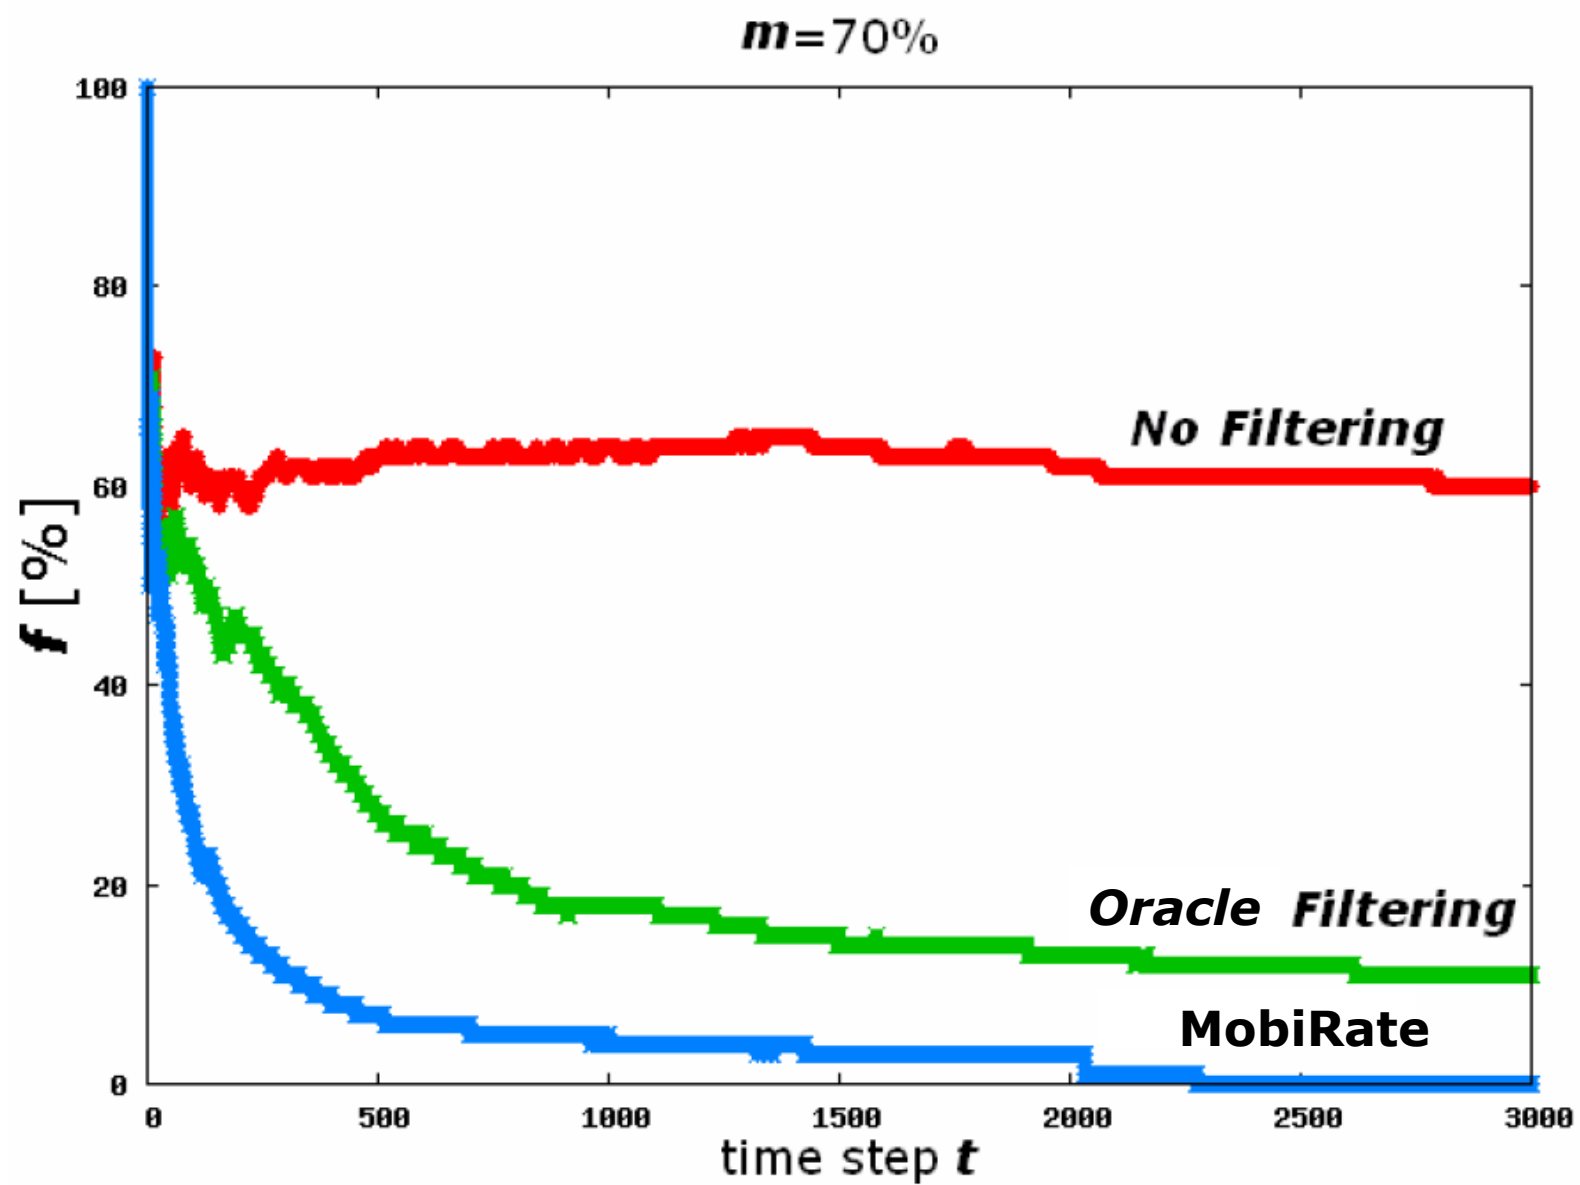

gossip

Hey B, I'll periodically audit u

$m=70\%$

Does MobiRate work?

√ It's robust to malicious individuals!
Does it run on phones?
